As far as stock products (actually any product!)….you can release copies of the quantitative + endotoxin report from ARL as soon as you get them…..just do not release the sterility C of A till day #14= complete.
Since the endotoxin report is separate from sterility + a fast test, can they print each separately so that we do not have to wait 14+ days to release an endotoxin report to a client?.....talk to ARL please……thanks
